

PE 100 Pipe Systems

Heiner Brömstrup

Subject matters of the book are all practice-relevant questions regarding the construction, operation and maintenance of pipeline systems made from the pipe material PE 100. Because of the considerably increased performance, pipe and pipe systems made from PE 100 enlarge the range of applications in the sectors of gas and water supply, sewage disposal, industrial pipeline construction and in the reconstruction and redevelopment of defective pipelines (relining). This 3rd edition refers exclusively to pressure pipe systems from the production of PE 100 high-performance raw material and the manufacture of pipes and fittings up to pipelaying followed by descriptions of new pipeline projects realised in Switzerland, Austria, Portugal, Romania, United Kingdom and Germany.
